font-size:50;"><u> Intoduction
to Java Programming</u></h2>
<p
style="font-size:20;"><b><big><
u style="color:blue;"
>Java</big></u></b><i> is a
high-level programming language
originally developed by</i> <u
style="color:blue;" ><big><b>
Sun
```

Microsystems

and released in 1995.

It is used to construct applications in

laptops, data contents, game consoles, scientific supercomputers, cell phones and other devices.

*The primary objective of Java programming language creation was to make it portable, simple and secure programming language. Apart from this, there are also some excellent features which play an important role in the popularity of this language. The features of Java are also known as*

style="color:blue;" >Java buzzwords</big></u>.Java code can be executed on multiple platforms, for example, windows, Linux, Sun Solaris, Mac/OS, etc. Java code is compiled by the compiler and converted into bytecode. This bytecode is a platform-independent code because it can be run on multiple platforms, i.e., Write Once and Run Anywhere (WORA).</i></p>
